

Nasal / upper-airway context

RSV

hRV

Cilium organization / movement ↓

Transcriptomic program mapped to ciliated epithelium

Inflammatory programs ↑

Myeloid

Neutrophil

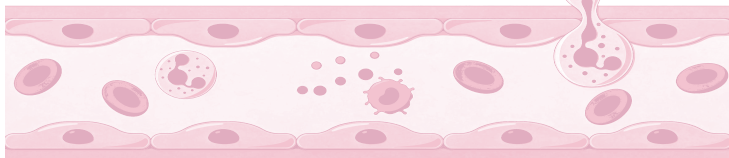

Interferon

Repair / turnover

Wound healing increased
Apoptosis regulation increased
Epithelial proliferation increased

Acute → Discharge

Systemic blood compartment

Interferon–myeloid modules ↑

Lymphocyte-related modules ↓

16

blood–airway
candidates

Note: No analyzed cohort included BFFF exposure; intervention effects, direction of regulation, and target binding remain untested.
